

## Module 5.2 – Value Stream Mapping

Brayan Covarrubias

### Laundry Day -

#### Analyzing Lean Metrics -

- Sort dirty pile – 5 min
- Wash – 50 min
- Dry – 1 hr
- Sort clean pile – 15 min
- Fold / Hang / Iron – 30 min
- Put Away – 15 min

#### Optimize my Processes -

- Potential bottleneck can include the “Clean Pile”, which can also derail into just keeping the pile and stopping the flow

- Reducing batch sizes, such as a mid-week wash, can prevent an overwhelming clothes pile to wash at the end of the week, especially during remote working days

- Have the “Dry” cycle absorb the “Fold / Hang” step, making the Dry part not be considered done unless clothes are immediately sorted and hanged right out the dryer. “Iron” can stay as a step after drying.
